

Mitten made of aramid fabric

Product Code:
H111B130

These gloves made of aramid fabric are ideal for the working with hot sharp-edged parts up to 500°C. Especially the weight of the workpiece to be transported is important because it influences the flow rate of the heat inside the glove. Due to the individual design, the gloves have a double lifetime as they can be worn on both sides and are therefore cost-saving.

Application: transport of hot castings, working in the glass industry, furnace construction, etc.

- abrasion resistant
- cut resistant
- best handling
- ambidextrous
- double layer inner glove made of BWS
- length approx. 300 mm
- Available in other lengths
- Available in size 10
- Available in other materials
- ADDons possible
